

RocketValve™

In the potato planting business, everything comes down to precision seed placement and machine reliability. Skips are evil. So are doubles. And maintenance problems are just awful.

If you own an Air Cup, you own the most precise, expensive planter on the market. You go through the hassle—and expense—of swapping out valve components every year because precision planting drives your profits.

All of the RocketValve™ components, from the RocketCoated stationary valves and shafts to the beefed up pick wheel assembly backing, to the precision machined plastic valve seal, work together to optimize the Air Cup's vacuum distribution system.

RocketValve: Making a good machine great.

Tough Components. Easy Decision.

- **Rapid Return on Investment.** Will typically pay for itself the first season with just a 1% bump in planter efficiency.
- **Fuel Efficient.** No need to overspin the vacuum fan to compensate for poor vacuum distribution.
- **Saves labor.** RocketValves have never needed to be torn down and rebuilt—even after 7 years and 8,000+ acres.
- **Reliable.** The RocketCoat coating simply doesn't wear out. Over 500 original RocketCoat stationary valves are still in service after as many as 12 seasons and 12,000 acres.
- **Proven.** Now backed by the *RocketValve Forever Warranty*.

Precision and reliability.

Now covered by our *RocketValve Forever Warranty*

“We used to get a maximum of 2,000 acres per set of valves. Our RocketCoated valves show no wear after 12,000 acres.”

Richard Gutierrez
Farm Equipment Manager, Johnson Agriprises,
Othello, WA

“Does the entire farm management team think this is a good investment? Yes. Did we see an unbiased, vast improvement? Yes. Would we do it again? Yes. Why? Because it makes both production and mechanical sense.”

**Carl Boorman
Boorman Farms, Quincy, WA**

The **RocketValve™** Forever Warranty

No weasel words. Transferable from machine to machine, owner to owner. Simply put, we will warrant our components for the lifetime of the valve.

Specifically:

- The RocketCoat coating will not wear through on the stationary valve or the shaft bearing surface.
- The precision bronze bearing will not wear out.
- The plastic seal surface on the pick wheel assembly will not wear out.

Remedy: We will repair or replace, at our option, any of our components that are defective, have a worn-through RocketCoat coating, or have worn-out plastic. Simply return the valve assembly to EIC; we will even reassemble the valve and pay for return shipping.

This warranty excludes product misuse, abuse, modifications, improper installation and maintenance, and incidental and consequential damages.
